

### Abstract of the Disclosure

## GRAFFITI ENTRY IN PHONE DIALER

5

A graphical user interface (GUI) (202) converts stylus strokes (106) into characters (204), which are applied to a dialer (206) in a telephone. The dialer converts the characters into dial signals (108), such as tone combinations or (in older machines) pulse strings, which dial the indicated phone number.

10

With the exception of the first, the other three are in the same order as in the original.
